ARBSTER.IO

Revolutionising the way arborists plan and assess risk.

Stockholm, Sweden

First: What is an Arborist?

Tree Care and Maintenance:

Arborists are responsible for the proper care and maintenance of trees, including pruning, fertilizing, and diagnosing potential health issues. They use their expertise to determine the best methods for promoting healthy growth, preventing diseases, and addressing pest problems. This aspect of their work involves understanding the unique needs of various tree species, as well as the environmental factors that impact their health.

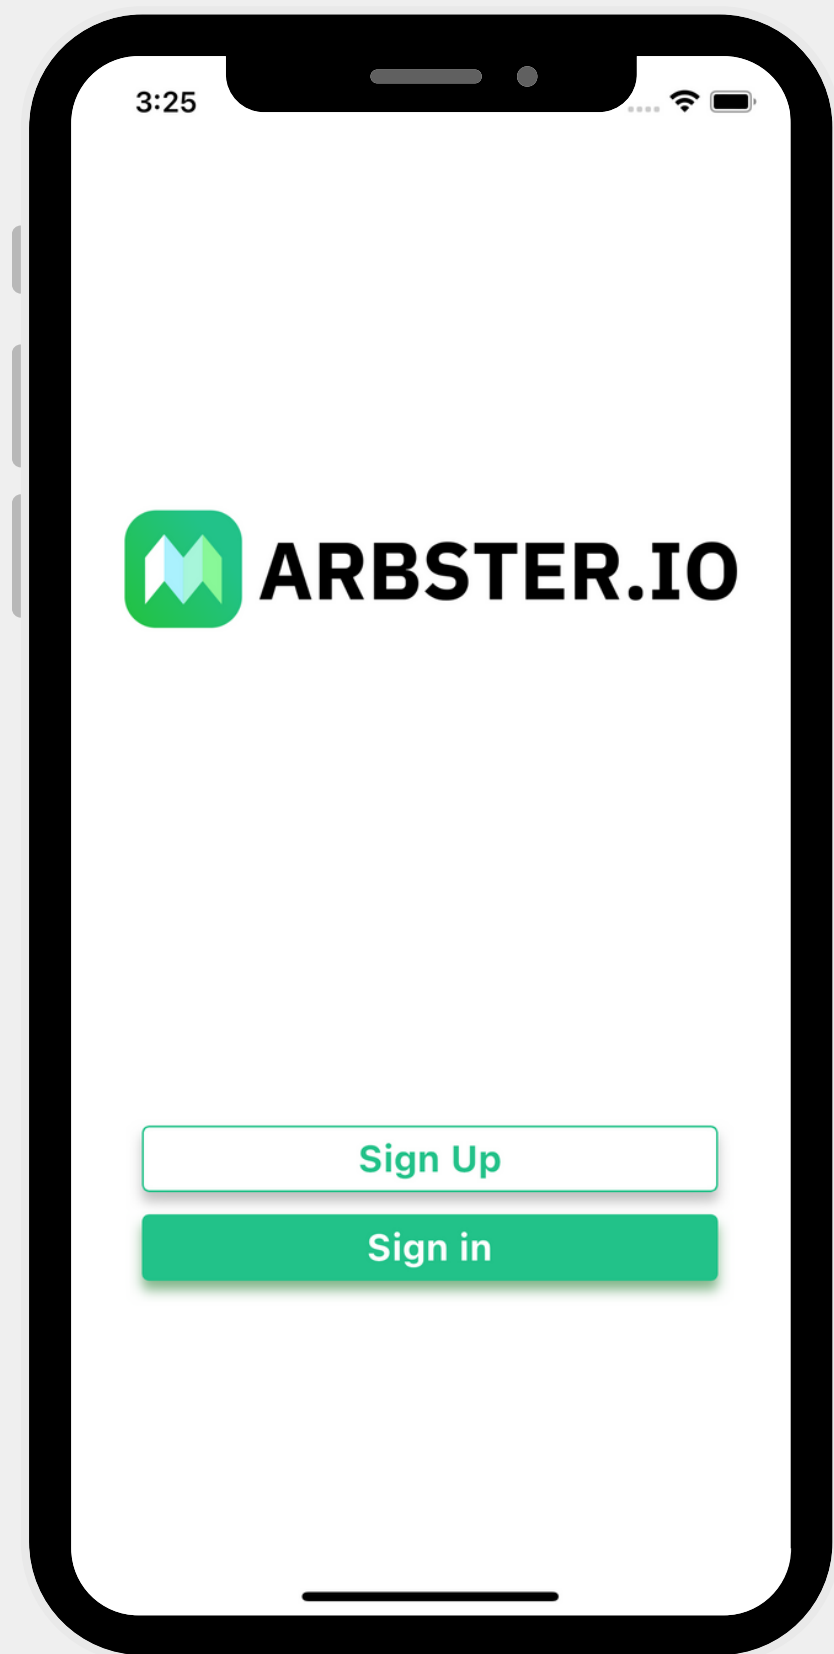

Tree Risk Assessment and Removal:

Arborists conduct tree risk assessments to identify potential hazards, such as weak branches, structural issues, or diseases that could lead to tree failure. They provide recommendations on how to mitigate these risks and, when necessary, safely remove trees that pose a threat to people, property, or other vegetation. This aspect of their work requires specialized knowledge of tree biology, as well as practical skills in using equipment for safe and efficient tree removal.

Planting and Preservation:

Arborists are involved in the planting and preservation of trees and other woody plants in urban and natural environments. They help select the appropriate species for a given location, considering factors like climate, soil conditions, and available space. Additionally, they advise on best practices for planting and transplanting trees, ensuring their long-term survival and growth. Arborists also play a role in preserving existing trees during construction projects or other activities that could impact their health or structural integrity. »

Assesment Submission

>

☐ The overall workplan has been worked though and communicated to everyone involved

☐ Everyone is sufficiently rested and sufficiently qualified to work according to the overall work plan

Risk Assessment Matrix

Use the below matrix to evaluate the overall risk situation, considering the points that you have gone through in this assesment.

RISK ASSESSMENT MATRIX				
SEVERITY PROBABILITY	Catastrophic (1)	Critical (2)	Marginal (3)	Negligible (4)
Frequent (A)	High	High	Serious	Medium
Probable (B)	High	High	Serious	Medium
Occasional (C)	High	Serious	Medium	Low
Remote (D)	Serious	Medium	Medium	Low
Improbable (E)	Medium	Medium	Medium	Low
Eliminated (F)	Eliminated
